Plastic Modular Belts

Product Guide

Media 4178 EN

Product liability, application considerations

If the proper selection and application of Habasit products are not recommended by an authorized Habasit sales specialist, the selection and application of Habasit products, including the related area of product safety, are the responsibility of the customer. All indications / information are recommendations and believed to be reliable, but no representations, guarantees, or warranties of any kind are made as to their accuracy or suitability for particular applications. The data provided herein are based on laboratory work with small-scale test equipment, running at standard conditions, and do not necessarily match product performance in industrial use. New knowledge and experiences can lead to modifications and changes within a short time without prior notice.

BECAUSE CONDITIONS OF USE ARE OUTSIDE OF HABASIT'S AND ITS AFFILIATED COMPANIES' CONTROL, WE CANNOT ASSUME ANY LIABILITY CONCERNING THE SUITABILITY AND PROCESS ABILITY OF THE PRODUCTS MENTIONED HEREIN. THIS ALSO APPLIES TO PROCESS RESULTS / OUTPUT / MANUFACTURING GOODS AS WELL AS TO POSSIBLE DEFECTS, DAMAGES, CONSEQUENTIAL DAMAGES, AND FURTHER-REACHING CONSEQUENCES.

▲ WARNING

Habasit belts and chains are made of various plastics that WILL BURN if exposed to sparks, incendiaries, open flame or excessive heat. NEVER expose plastic belts and chains to a potential source of ignition. Flames resulting from burning plastics may emit TOXIC SMOKE and gasses as well as cause SERIOUS INJURIES and PROPERTY DAMAGE. See the Fire Hazard Data Sheet for additional information.

Protection type of all belts IP 2x (DIN EN 60259 / IEC 529)

Exceptions (IP1x) : F51, F52, F53, F54, SP615, IS615, SP620, IS620, PR620, PR620 SPS, PR 620TTR, PR620 SPS CT, M2586, M3892, M5290, M5293

The Habasit Solution

304

What do you need to know to select a belt style? Why are there so many different belts available? Below we have outlined a few things to think about when selecting a belt style. Always try to match the belt style to your products. Refer to other areas of the catalog for specific belt information or conveyor design guidelines.

Belt path

When you need to move product in a straight line, you would generally use a straight running belt. If you need to move your product in turns, you would use a turning belt. Straight running belts will generally take higher loads than turning belts. Our turning belts are called “radius” belts. Other manufacturers refer to them as side flexing belts. In either case, these allow you to have a conveyor that goes around a turn to avoid equipment, conform to the shape of your production area, or minimize transfers. Product remains properly orientated while on the belt. Radius belts will operate in both straight and radius applications. Radius belts will also decrease the amount of drives for certain applications.

Belt surface

The top surface of the belt is what your product comes in contact with and can have an effect on your product. If your product is soft, the belt surface could be imprinted on the bottom of your product during the freezing, cooking or cooling stages. If your product is hard, the footprint does not affect the product. If your product is sticky, you may want to choose a belt surface with reduced contact area and/or a material that offers high release characteristics such as polyethylene or acetal. Some belts have openings to allow for air or fluid flow in applications such as cooling, washing, sanitizing, sizing, sorting, removal of “fines”, etc. Curved top belt styles allow continuous contact of a scraper to maximize product removal and gives tighter transfer of product to a deadplate of another conveyor. Some belts have a raised rib surface and are used with a finger transfer plate. These “fingers” fit between the ribs and as the belt moves, the finger transfer plate lifts the product from the belt.

Belt accessories

Many belts have accessories such as rollers (for product accumulation or acceleration), ribs or flights (to contain product on incline/declines), side plates (to

keep material from falling off), high friction inserts (to keep product from slipping), and hold-down tabs (to keep the belt from rising up in turns). You may have to decide if the belt you choose offers the options you want.

Cleanability

Belts used in food applications need to be easy to clean and comply with certain regulatory requirements. You will need to determine if the belt you choose meets the cleaning requirements for your application.

Belt pitch

Belts come in various pitches (belt pitch: center of pin to center of pin). Smaller pitch belts generally run smoother, faster and allow tighter transfers. Larger pitch belts generally will take larger loads, more impact and longer runs.

Belt color

Most belts are available in the industry accepted standard colors. Additional colors are available, but may incur additional charges and longer lead-time.

Belt material

There are many environmental factors that may affect the performance of a conveyor belt. Some of these are:

- higher or low temperatures may reduce the belt strength and affect impact strength
- ovens may melt or dry out certain materials
- heavy impacts are not achievable with certain materials
- immersion in water can cause materials to swell
- cleaning chemicals or solutions can harm belting
- abrasive materials can wear out belting prematurely
- material additives can make a belt material so it can be detected by a metal detector

Therefore, it is very important to pick the right material for the right application. Use charts showing material characteristics and chemical resistance.

Pins / Rods

Our belts are connected with connection rods or pins. These pins are made from plastic or stainless steel material, and they are subject to the same environmental conditions.

▲ Belts must not be exposed to direct heat or flames.

HabasitLINK® straight - 0.3" pitch belting M0870 Micropitch Flat Top 0.3"

Description

- 0% open area
- Solid plate
- Imperial belt width
- Dynamic open hinge, easy to clean
- Rod diameter 3 mm (0.12")
- Nosebar diameter 6 mm (0.236")
- Snap Fit rod retaining system
- Food approved materials available

Belt data

Belt material		POM
Rod material		PA
Nominal tensile strength F'_N straight run	N/m lb/ft	2500 171
Temperature range	°C °F	-40 - 93 -40 - 200
Belt weight m_B	kg/m ² lb/sqft	5.3 1.09

Diameter of idling rollers (minimum)		Diameter of support rollers (minimum)		Diameter for gravity take-up and center drive rollers (minimum)	
mm	inch	mm	inch	mm	inch
6	0.236	50	2	50	2

Standard range of belt widths b_0

mm (nom.)	101.6	203.2	304.8	457.2	609.2	762.0	914.4	etc.
inch (nom.)	4	8	12	18	24	30	36	etc.

Real belt widths are in most cases 0.1% to 0.3% smaller.

Standard belt widths in increments 6.0" (152,4 mm). Non-standard widths are offered in increments of 2.0" (50.8 mm). Please check the correct sprocket position with your local contact. Smallest possible width 4.0" (101.6 mm).

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® straight - 0.3" pitch belting M0873 Micropitch Non Slip 0.3"

Description

- 0% open area
- Solid plate
- Imperial belt width
- Dynamic open hinge, easy to clean
- Rod diameter 3 mm (0.12")
- Nosebar diameter 6 mm (0.236")
- Snap Fit rod retaining system

Key ways for round bore shape follow European standards for metric sizes and US standards for imperial sizes. For detailed dimensions see table in the Engineering Guide chapter Design Guide.

Other materials are available on request.

Sprocket arrangement

BE Belt
RC Retainer
SP Sprocket
b₀ belt width

The distance **C** between the sprocket axis and the slider support **ST** is minimal 28 mm (1.1").

Wearstrips

Between driving shaft and idling sprockets or rollers the belt is carried by a slider support furnished with longitudinal wear strips (SL) from UHMW Polyethylene or other suitable material.

HabasitLINK® sprockets 0.3" pitch belting

Sprocket series M0800

Sprocket positioning

For correct positioning of the center sprocket divide the belt width by the link increment. The rounded result will be an even or an odd number. These numbers are the criteria for offset or no offset, see table.

Belt type	Sprocket spacing a		Sprocket edge distance (minimal)		Criteria for center sprocket position	Result of formula (rounded)	Offset e	Remarks
	minimal mm inch	maximal mm inch	X _L mm inch	X _R mm inch				
M0870	76.2 3	152.4 6	25 1	25 1	b ₀ / 50.8 b ₀ / 2	even number (2, 4, 6 ...)	0	right or left side
						odd number (3, 5, 7 ...)	0	right or left side
M0870 MTW M0873	76.2 3	152.4 6	38 1.5	38 1.5	b ₀ / 50.8 b ₀ / 2	even number (2, 4, 6 ...)	12.7 0.5	right or left side
						odd number (3, 5, 7 ...)	12.7 0.5	right or left side

M0870

M0870 MTW / M0873

Numbers of sprockets and wearstrips (returnway - refer to option A in the sketch)

Standard belt width (nominal)		Number of sprockets per shaft	Number of wearstrips
mm	<i>inch</i>	min. number	Returnway (bottom) (refer to A in the sketch)
152	6	2	2
305	12	4	2
457	18	6	3
610	24	8	4
762	30	10	4
914	36	12	5
1067	42	14	6
1219	48	16	6
1372	54	18	8
1524	60	20	8
1676	66	22	10
1829	72	24	10
1981	78	26	12

Arrangement of wearstrips on the carryway (refer to option B in the sketch)

The distance l_w is equal or smaller 150 mm (depending on the load).

The number of sprockets depends on the belt load and may be different for driving and idling shafts. For calculation of correct sprocket number please use LINK-SeleCalc.

Description

- Imperial belt width
- 50% open area; 82% open contact area; largest opening 8x21 mm (0.3"x0.83")
- Open hinge
- Food approved materials available
- Rod diameter 3.6 mm (0.14")
- Smart Fit rod retention
- Double row bidirectional sprocket
- Suitable for Ø 12.7 mm (0.5") nosebar

inch (nom.)	8	10	12	14	16	18	20	22	24	26	28	30	32	24	etc.

Real belt widths are in most cases 0.1% to 0.3% smaller.

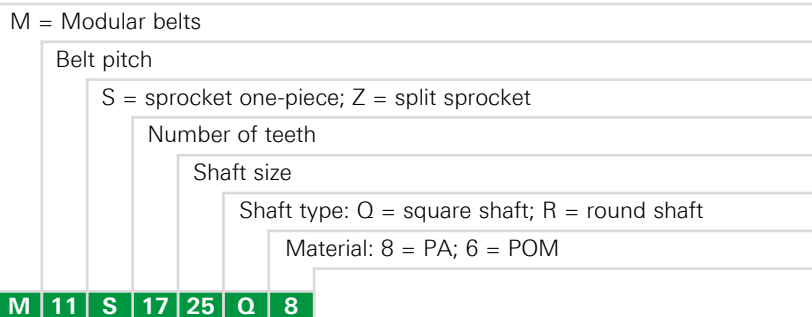

Standard belt widths in increments of 50.8 mm (2"). Non-standard widths are offered in increments of 12.7 mm (0.5"). Smallest possible width 177.8 mm (7").

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® sprockets 1/2" pitch belting

S-C1: machined sprockets. Other sprocket and hub sizes on request.

Key ways for round bore shape follow European standards for metric sizes and US standards for imperial sizes. For detailed dimensions see table in the Engineering Guide chapter Design Guide.

Other materials available on request.

Sprocket one-piece (solid)

Sprocket arrangement

BE Belt
RC Retainer
SP Sprocket
b₀ belt width

The distance **C** between the sprocket axis and the slider support **ST** is minimal 14 mm (0.55").

Wearstrips

Between driving shaft and idling sprockets or rollers the belt is carried by a slider support furnished with longitudinal wear strips (SL) from UHMW Polyethylene or other suitable material.

Sprocket positioning

For correct positioning of the center sprocket divide the belt width by the link increment. The rounded result will be an even or an odd number. These numbers are the criteria for offset or no offset, see table.

Belt type	Sprocket spacing a		Sprocket edge distance (minimal)		Criteria for center sprocket position	Result of formula (rounded)	Offset e	Remarks
	minimal	maximal	X _L	X _R				
	mm inch	mm inch	mm inch	mm inch				
M1185	50,8 2	101.6 4	63,5 2,5	63,5 2,5	n.a.	n.a.	12,7 0,5	Offset to which side right or left side for all belt widths

In addition to the sprockets it is recommended to use support rollers at the belt edges on drive and idling side. Distance of the center of the support roller to the belt edge: X_L and X_R

M1200 sprocket series are applicable with M1185 only in running direction (A)
 See page 27, sprocket series M1200.

HabasitLINK® sprockets 1/2" pitch belting

Sprocket series M1100

Numbers of sprockets and wearstrips for M1185

Standard belt width (nominal)		Number of sprockets per shaft	Number of wearstrips

1'270	50	13	10	6
1'321	52	13	10	6
1'372	54	13	10	6
1'422	56	15	11	6
1'473	58	15	11	6
1'524	60	15	11	6
1'575	62	15	12	7
1'626	64	17	12	7

The number of sprockets depends on the belt load and may be different for driving and idling shafts. For calculation of correct sprocket number please use LINK-SeleCalc.

HabasitLINK® straight - 1/2" pitch belting M1220 Flat Top 0.5"

Description

- "Nosebar transfer", recommended diameter 18 mm (0.71"); 16 mm (0.63") possible
- 0% open area
- Food approved materials available
- Easy to clean, open hinge
- Rod diameter 5 mm (0.2")
- "Open window" sprockets

Available accessories

- Flights
- Side guards
- GripTop modules

HabasitLINK® straight - 1/2" pitch belting M1220 ActivXchange 0.5"

Description

- 0% open area
- Solid plate
- Smooth and flat surface with flush edges
- Designed for 90° self clearing transfer
- Suitable for 83.8 mm (3.3") track
- 10 mm (0.39") thick
- Rod diameter 4.5 mm (0.18")
- Smart Fit rod retaining headless
- Food approved materials available
- Robust design
- Suitable with all M1200 sprockets
- Tracking tabs for belt guiding

inch (nom.)	6	8	10	12	14	16	18	20	22	24	26	28	30	etc.

Real belt widths are in most cases 0.1% to 0.3% smaller.

Standard belt widths in increments of 2.0" (50.8 mm). Non-standard widths are offered in increments of 0.67" (16.9 mm). Smallest possible width 6.0" (152.4 mm).

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® straight - 1/2" pitch belting M1280 ActivXchange 0.5"

Description

- 8.7 mm (0.34") thick
- Imperial width
- 18% open area
- 87% open contact area
- Open hinge
- Rod diameter 4.5 mm (0.18")
- Smart Fit rod retaining headless
- Optimized edges for smooth sliding transfer
- Suitable with all M1200 sprockets
- Smooth surface with flush edges
- Designed for 90° self clearing transfer
- Tracking tabs for belt guiding

S, Z: molded sprockets; Z-H: Multi-Hub sprockets. Other sprocket and hub sizes on request.

Key ways for round bore shape follow European standards for metric sizes and US standards for imperial sizes. For detailed dimensions see table in the Engineering Guide chapter Design Guide.

Other materials available on request.

Sprocket one-piece ("open window")

Split sprocket

Sprocket arrangement

BE Belt
RC Retainer
SP Sprocket
b₀ belt width

The distance **C** between the sprocket axis and the slider support **ST** is minimal 14 mm (0.55").

Wearstrips

Between driving shaft and idling sprockets or rollers the belt is carried by a slider support furnished with longitudinal wearstrips (ST) from UHMW Polyethylene or other suitable material.

Sprocket positioning

For correct positioning of the center sprocket divide the belt width by the link increment. The rounded result will be an even or an odd number. These numbers are the criteria for offset or no offset, see table.

Belt type	Sprocket spacing a		Sprocket edge distance (minimal)		Criteria for center sprocket position	Result of formula (rounded)	Offset e	Remarks
	minimal mm inch	maximal mm inch	X _L mm inch	X _R mm inch				
M1185*	50.8 2	101.6 4	50.8 2	50.8 2	n.a.	n.a.	0 0	Offset to which side in running direction A only
M1200	50 2	100 4	25 1	25 1	n.a.	n.a.	0 0	no offset for all belt widths

* For POM and PA belts a maximal admissible load 70% is recommended.

M1200 sprocket series are applicable with M1185 only in running direction (A)

Numbers of sprockets and wearstrips for series M1200

Standard belt width (nominal)		Number of sprockets per shaft		Number of wearstrips

The number of sprockets depends on the belt load and may be different for driving and idling shafts. For calculation of correct sprocket number please use LINK-SeleCalc.

HabasitLINK® accessories – 1/2" pitch belting

Flights and side guards M1200

HabasitLINK® modular belts are available with flights to convey products on inclined conveyors. The flight modules are injection-molded one-piece designs that, when assembled, become an integral part of the belt. Flight modules are designed with ribs on one or both sides (no-cling) for improved release of wet or sticky food products and can also be cut to nonstandard heights. The flights fit all series M1200 belts except M1230, side guards fit to M1220 only.

	Flight straight ribs on one side		Flight straight ribs on both sides		Side guards
Code	M1220F05		M1234F05		M1220G05
height H	H	L	H	L	H

mm	50	150	50	100	50
inch	2	6	2	4	2

M1220F05

M1234F05

M1220G05

Indents (E)

The flight indent E is the distance between the edge of the belt and the edge of the flight. It is required for adequate support of the belt on its return way and hold-down during back bending applications (elevators).

On short conveyors or with special support structure, the flights may also be applied over the full belt width (E = 0).

Notch (N)

The notch N is a gap in each row of flights, longitudinally aligned to allow the support of belts wider than 600 mm (24") on their return way or in backbending applications. The notch width (N) and the distance (M) from the belt edge is a multiple of the link increment 16.67 mm (0.66"). For M1200 series the minimum notch width is 33.3 mm (1.31").

Installation of flights and side guards; indents

The side guards have a pitch of 25.4 mm (1"), that is twice the module pitch. Therefore only one link per module needs to be cut for the side guard installation. This special solution provides higher strength. The smallest applicable sprocket size is M12S15 (15 teeth). The distance E_1 between the flight end and the hold-down and support-shoes/wear strips should not be smaller than 5 mm (0.2").

	Possible flight indents E

HabasitLINK® straight 1/2" pitch belting SM605 (Smooth Mesh)

Description

- 1/2 inch pitch
- 30% open area
- Food approved materials
- Bi-directional
- 3/4 inch (19.1 mm) diameter nosebar capability
- Connecting rod diameter = 0.172 inch (4.4 mm)
- Standard belt width increments = 1 inch (25.4 mm) nominal, starting from 2 inches (50.8 mm)
- Non-standard widths available in 1/2 inch (12.7 mm) increments starting at 3 inches (76.2 mm) upon request
- Material selection may affect belt width – please contact your local partner for actual dimensions

Do not use sprockets smaller than 11 tooth, 4.0" (101.6 mm), as drive sprockets. Specify belt material at time of ordering for correct sprocket sizing.

HabasitLINK® straight 3/4" pitch belting

106 FT (106 Flat Top)

Description

- 3/4 inch pitch
- Solid top surface
- Food approved materials
- Bi-directional
- Connecting rod diameter = 0.188 inch (4.8 mm)
- Standard belt width increments = 3/4 inches (19.1 mm) nominal, starting from 3 inches (76.2 mm)
- Material selection may affect belt width – please contact your local partner for actual dimensions

Belt data

Belt material		PP	POM	POM L

Real belt widths are in most cases 0.1% to 0.3% smaller.

Standard belt widths in increments of 85 mm (3.35"). Non-standard widths are offered in increments of 17 mm (0.67"). Smallest possible width 85 mm (3.35").

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® straight - 1" pitch belting M2420 ActivXchange 1"

Description

- 0% open area
- Solid plate
- Smooth and flat surface with flush edges
- Designed for 90° self clearing transfer
- Suitable for 83.8 mm (3.3") track
- 8.7 mm (0.34") thick
- Rod diameter 4.5 mm (0.18")
- Smart Fit rod retaining headless
- Food approved materials available
- Robust design
- Suitable with all M2400 sprockets
- Tracking tabs for belt guiding

M2470L04	POM +LF	PP	2100	473	1.18	0.79

Real belt widths are in most cases 0.1% to 0.3% smaller.

Diameter of idling rollers (minimum)		Diameter of support rollers (minimum)		Diameter for gravity take-up and center drive rollers (minimum)	
mm	inch	mm	inch	mm	inch
50	2	100	4	40	1.6

Temperature range

Module material	Rod material	Temperature range	
POM +LF	PA	-40 °C to +93 °C	-40 °F to +200 °F
POM +LF	PBT	-40 °C to +93 °C	-40 °F to +200 °F
POM +LF	PP	+5 °C to +93 °C	+40 °F to +200 °F

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® straight - 1" pitch belting M2472 Perforated Flat Top 1"

Description

- Imperial belt width
- 8.7 mm (0.34") thick
- 5.9% open area
- 4 mm (5/32") diameter vacuum holes
- Closed hinge
- Rod diameter 4.5 mm (0.18")
- Headless Smart Fit rod retention accessibility from the top
- Strong closed edges
- Beveled edges for smooth side transfer
- Lug teeth sprockets

Belt data

Belt material		PP		POM	
Rod material		PP		POM	
Nominal tensile strength F'_N	N/m	17200	18500	30000

	lb/sqft	1.16	1.16	1.78	

Diameter of idling rollers (minimum)		Diameter of support rollers (minimum)		Diameter for gravity take-up and center drive rollers (minimum)		Backbending radius for elevators without side guards or hold-down devices (minimum)	
mm	inch	mm	inch	mm	inch	mm	inch
40	1.6	50	2	100	4	150	6

We recommend to use an idle roller width with a minimum of 25 mm (1") free belt edge on each side.

Standard range of belt widths b_0

mm (nom.)	152	305	457	610	762	914	1067	1219	1372	1524	1676	1829	1981	etc.
inch (nom.)	6	12	18	24	30	36	42	48	54	60	66	72	78	etc.

Real belt widths are in most cases 0.1% to 0.3% smaller.

Standard belt widths in increments of 76.2 mm (3"). Non-standard widths are offered in increments of 15.24 mm (0.6"). Smallest possible width 76.2 mm (3").

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

Description

- 25% open area; 51% open contact area; largest opening size: 3.6 x 10.2 mm (0.14 x 0.40")
- Closed hinge
- Rod diameter 4.5 mm (0.18")
- Headless Smart Fit rod retention
- Beveled edges for smooth side transfer
- Optimized for 50 mm (2") idle roller diameter 40 mm (1.6") possible
- Lug teeth sprockets

Available accessories

- Tab modules with 2 tabs (Code: -T2)

HabasitLINK® straight - 1" pitch belting M2480 ActivXchange 1"

Description

- 25% open area
- Smooth and flat surface with flush edges
- Designed for 90° self clearing transfer
- 8.7mm (0.34") thick
- Rod diameter 4.5 mm
- Smart Fit rod retaining headless
- Food approved materials available
- Robust design
- Suitable with all M2400 Sprockets
- Tracking tabs for belt guiding

S: molded sprockets; S-C1: machined sprockets; Z-H: Multi-Hub sprockets. Other sprocket and hub sizes on request.

Key ways for round bore shape follow European standards for metric sizes and US standards for imperial sizes. For detailed dimensions see table in the Engineering Guide chapter Design Guide.

Other materials available on request.

Sprocket one-piece (solid)

Sprocket arrangement

The distance **C** between the sprocket axis and the slider support **ST** is minimal 28 mm (1.1").

BE Belt
RC Retainer
SP Sprocket
b₀ belt width

Wearstrips

Between driving shaft and idling sprockets or rollers the belt is carried by a slider support furnished with longitudinal wear strips (SL) from UHMW Polyethylene or other suitable material.

Sprocket positioning

For correct positioning of the center sprocket divide the belt width by the link increment. The rounded result will be an even or an odd number. These numbers are the criteria for offset or no offset, see table.

Belt type	Sprocket spacing a		Sprocket edge distance (minimal)		Criteria for center sprocket position	Result of formula (rounded)	Offset e	Remarks
	minimal mm inch	maximal mm inch	X _L mm inch	X _R mm inch				
M2420	51	170	42.5	42.5	b ₀ / 17 b ₀ / 0.67	even number (2, 4, 6 ...)	8.5 0.33	Offset to which side
	2	6.7	1.67	1.67		odd number (3, 5, 7 ...)	0 0	no offset
M2470 M2480	50.8	152.4	23	23	b ₀ / 15.24 b ₀ / 0.6	even number (2, 4, 6 ...)	7.6 0.29	right or left side
	2	6	0.9	0.9		odd number (3, 5, 7 ...)	0 0	no offset

Numbers of sprockets and wearstrips for M2420

Standard belt width (nominal)		Number of sprockets per shaft	Number of wearstrips	
mm	<i>inch</i>	min. number	Carryway (top)	Returnway (bottom)
85	3.3	1	2	2
170	6.7	2	2	2

Use the largest possible backbending radius for elevators with side guards or hold-down devices.

Standard range of belt widths b_0

mm (nom.)	50	100	150	200	250	300	350	400	450	500	550	600	650	700	etc.
inch (nom.)	2	4	6	8	10	12	14	16	18	20	22	24	26	28	etc.

Real belt widths are in most cases 0.1% to 0.3% smaller.

Standard belt widths in increments of 50 mm (2"). Non-standard widths are offered in increments of 16.66 mm (0.66"). Smallest possible width 83.4 mm (3.25"). Non-bricklaid belts 200 mm (8") wide.

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® straight - 1" pitch belting

M2520 Flat Top 1"

Description

- 0% open area
- High lateral stiffness
- Food approved materials available
- Rod diameter 5 mm (0.2")
- "Open window" sprockets

Available accessories

- Flights and Scoops
- Side guards
- Hold-down devices
- GripTop modules

⁽¹⁾ In most cases standard sprockets are suitable. Depending on the application requirements it may be necessary to select a different sprocket material like Polyamide, Polyurethane or Polypropylene. For Polyamide +HT, Polyamide +GF and Super High Temperature belt materials it is recommended to use sprockets of the Super High Temperature material.

⁽²⁾ Flammability classification UL 94 and ISO 340 see Glossary in the HabasisLINK® Engineering Guidelines.

Belt width for Polyamide +GF, Polyamide +HT and Super High Temperature material

mm (nom.)	50.5	101.0	151.5	202.0	252.5	303.0	353.5	404.0	454.5	505.0	555.5	606.0	etc.
inch (nom.)	1.99	3.98	5.96	7.95	9.94	11.93	13.92	15.90	17.89	19.88	21.87	23.86	etc.

Real belt widths are in most cases 0.1% to 0.3% smaller.

Dimension change due to moisture

For Polyamide the dimension change due to moisture adsorption needs to be considered. For detailed information refer to the Calculation Guide in the HabasisLINK® Engineering Guidelines.

Dimension change due to temperature

For detailed information and correct calculation of length and width at varying temperature refer to the Calculation Guide in the HabasisLINK® Engineering Guidelines.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasisLINK® Engineering Guidelines.

HabasitLINK® straight - 1" pitch belting

M2533 GripTop 1"

Description

- Open area dependent on percentage of GripTop modules installed, as illustrated approx. 20%
- Food approved materials available
- Abrasion resistant GripTop, high friction
- Rod diameter 5 mm (0.2")
- "Open window" sprockets

Proposed pattern

- Indent 50 mm (2")
- GripTop rows every 2nd, 4th, 6th module row (multiples of 50.8 mm (2"))

Available accessories

- Flights
- Hold-down devices

Diameter of idling rollers (minimum)		Diameter of support rollers (minimum)		Diameter for gravity take-up and center drive rollers (minimum)		Backbending radius for elevators without side guards or hold-down devices (minimum)		Backbending radius for elevators with side guards or hold-down devices (minimum)	
mm	inch	mm	inch	mm	inch	mm	inch	mm	inch
40	1.6	50	2	100	4	150	6	250	10

Use the largest possible backbending radius for elevators with side guards or hold-down devices.

Standard range of belt widths b_0

mm (nom.)	200	300	400	500	600	700	800	900	1000	1100	1200	1300	1400	1500	etc.
inch (nom.)	8	12	16	20	24	28	32	36	40	43	47	51	55	59	etc.

Real belt widths are in most cases 0.1% to 0.3% smaller.

Standard belt widths in increments of 50 mm (2"). Non-standard widths are offered in increments of 16.66 mm (0.66"), minimum indent 33.3 mm (1.5").

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® straight - 1" pitch belting

M2533 Roller Top 1"

Description

- 35 % open area; largest opening 5.5x14 mm (0.22"x0.55")
- Roller lateral spacing see table belt data
- Rollers row spacing 50.8 mm (2")
- Roller dimensions Ø 15 mm, 5 mm wide (Ø 0.59" / 0.2") or Ø 18 mm, 16 mm wide (Ø 0.71" / 0.63")
- For low back pressure, wearstrips are placed between rollers
- For product driven application wearstrips are placed directly under the rollers
- Excellent for cooling and draining
- Open hinge
- Food approved materials available
- Rod diameter 5 mm (0.2")

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® Straight - 1" Pitch Belting M2585 Flush Grid 1"

Description

- Imperial belt width
- Excellent for cooling and draining
- Open hinge
- Superior cleanability
- Food approved materials available
- Smart fit rod retention

Version -P0:

- Plastic rod Ø 5mm (0.2") (general applications)
- 48% open area; 88% open contact area; largest openings 10x12 mm (0.4"x0.5") and 4x17 mm (0.15"x0.67")

Version -S0:

- Plastic rodlets with steel floaters Ø 3.5mm (0.14") (high temperature applications)
- 54% open area; 91% open contact area; largest openings 10x12 mm (0.4"x0.5") and 4x17 mm (0.15"x0.67")

Rollers (2 rows)	3	4	5	6	7	8	9	10	11	12	13	14	15	16	etc.

Real belt widths are in most cases 0.1% to 0.3% smaller.

Standard belt widths in increments of 50 mm (2"). Smallest possible width 200 mm (7.9").

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® radius 1" pitch belting M2544 Tight Radius 1"

Description

- For radius and straight conveying, ideal for applications with limited space (collapse factor 1.6)
- 38% open area; 75% open contact area; largest opening 6.5x12 mm (0.26"x0.47")
- Excellent for cooling and draining
- Easy to clean
- Food approved materials available
- Rod diameter 5 mm (0.2")

Available accessories

- Adjustable radius plugs available: sizes 1.9, 2.2 and 3.0 turning radius
- GripTop modules
- Lane divider
- Side tabs
- Clip-on side guards

Belt widths larger than 1200 mm (48") are not recommended. Please contact your Habasit representative. Real belt widths are in most cases 0.1% to 0.3% smaller.

Standard belt widths in increments of 50 mm (2"). Non-standard widths are offered in increments of 16.66 mm (0.66"). Smallest possible width 200 mm (7.9").

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® radius 1" pitch belting M2544 Tight Radius 1" MTW

Description

- Mold to width radius belt with side tabs
- For radius and straight conveying, ideal for applications with limited space
- Collapse factor:
 - M2544K04: 1.25
 - M2544K06: 1.32
- Open area: 38 % (M2544K04), 32 % (M2544K06)
- Open contact area: 64 %
- largest opening (belt edge):
4" width: 7.6 mm x 14.5 mm (0.30" x 0.57")
6" width: 10.0 mm x 12.8 mm (0.38" x 0.50")
- largest opening (middle of belt) for 4" and 6":
7.6 mm x 10.6 mm (0.30" x 0.39")
- Excellent for cooling and draining
- Easy to clean
- Food approved materials available
- Rod diameter 5 mm (0.2")

S, Z: molded sprockets. Other sprocket and hub sizes on request.

Key ways for round bore shape follow European standards for metric sizes and US standards for imperial sizes. For detailed dimensions see table in the Engineering Guide chapter Design Guide.

Other materials available on request.

Sprocket one-piece ("open window")

Split sprocket

Sprocket arrangement

BE Belt
RC Retainer
SP Sprocket
 b_0 belt width

The distance **C** between the sprocket axis and the slider support **ST** is minimal 28 mm (1.1").

Wearstrips

Between driving shaft and idling sprockets or rollers the belt is carried by a slider support furnished with longitudinal wearstrips (ST) from UHMW Polyethylene or other suitable material.

HabasitLINK® sprockets 1" pitch belting

Sprocket series M2500

Sprocket positioning

For correct positioning of the center sprocket divide the belt width by the link increment. The rounded result will be even or an odd number. These numbers are the criteria for offset or no offset, see table:

Belt type	Sprocket spacing a		Sprocket edge distance (minimal) *		Criteria for center sprocket position	Result of formula (rounded)	Offset e	Remarks
	minimal	maximal	X_L	X_R				
	mm inch	mm inch	mm inch	mm inch

S-C2: machined sprockets. Other sprocket and hub sizes on request.

Key ways for round bore shape follow European standards for metric sizes and US standards for imperial sizes. For detailed dimensions see table in the Engineering Guide chapter Design Guide.

Other materials available on request.

Sprocket one-piece (solid)

Sprocket arrangement

The distance **C** between the sprocket axis and the slider support **ST** is minimal 28 mm (1.1").

- BE** Belt
- RC** Retainer
- SP** Sprocket
- b₀** belt width

Wearstrips

Between driving shaft and idling sprockets or rollers the belt is carried by a slider support furnished with longitudinal wearstrips (ST) from UHMW Polyethylene or other suitable material.

Sprocket positioning

For correct positioning of the center sprocket divide the belt width by the link increment. The rounded result will be an even or an odd number. These numbers are the criteria for offset or no offset, see table.

Belt type	Sprocket spacing a		Sprocket edge distance (minimal) *		Criteria for center sprocket position	Result of formula (rounded)	Offset e	Remarks
	minimal mm inch	maximal mm inch	X _L	X _R				
M2585-P0 M2586	33.8 1.33	101.5 4	42 1.65	42 1.65	b ₀ / 33.8 b ₀ / 1.33	even number (2, 4, 6 ...)	8.5 0.33	right in running direction A left in running direction B
						odd number (3, 5, 7 ...)	8.5 0.33	left in running direction A right in running direction B
M2585-S0	33.8 1.33	101.5 4	59 2.32	59 2.32	b ₀ / 33.8 b ₀ / 1.33	even number (2, 4, 6 ...)	8.5 0.33	right in running direction A left in running direction B
						odd number (3, 5, 7 ...)	8.5 0.33	left in running direction A right in running direction B

* X_L and X_R are related to the running direction A and inverse for the running direction B.

M2585-S0, left edge X_L (M2585-P0, M2586 similar)

Number of sprockets and wearstrips for M2585, M2586

Standard belt width (nominal)		Number of sprockets per shaft	Number of wearstrips	
mm	inch		min. number	Carryway (top)
305	12	2	2	2
508	20	3	3	2
711	28	5	4	2
914	36	7	6	3
1117	44	7	8	3
1319	52	9	10	4
1522	60	11	10	4
1725	68	13	12	7
1928	76	13	12	7
2131	84	15	13	8
2333	92	17	16	8
2536	100	19	18	9

The number of sprockets depends on the belt load and may be different for driving and idling shafts. For calculation of correct sprocket number please use LINK-SeleCalc.

HabasitLINK® accessories – 1" pitch belting

Flights, side guards and scoops M2500 (straight belts)

HabasitLINK® modular belts are available with flights to convey products on inclined conveyors. The flight modules are injection-molded one-piece designs that, when assembled, become an integral part of the belt.

Flight modules are available with ribs on one side (no-cling) for improved release of wet or sticky food products and can also be cut to nonstandard heights.

4178BRO.MOD-en1112HQ

Indents (E)

The flight indent E is the distance between the edge of the belt and the edge of the flight, and F is the distance between belt edge and side guard. It is required for adequate support of the belt on its return way and hold-down during back bending applications (elevators).

On short conveyors or with special support structure, the flights may also be applied over the full belt width (E = 0). For the Flush Grid, flight edge modules with indents are available (fixed indent see illustration).

Notch (N)

The notch N is a gap in each row of flights, longitudinally aligned to allow the support of belts wider than 600 mm (24") on its return way or in back-bending applications. The notch width (N) and the distance M from the belt edge is a multiple of the link increment 16.67 mm (0.66"). For M2500 series the minimum notch width is 33.3 mm (1.31").

HabasitLINK® accessories – 1" pitch belting

Flights and side guards M2500 (straight belts)

Installation of flights and side guards; indents

(For radius belts please refer to the specific data sheets.)

The side guards are usually installed with a gap (G) between the side guards and the flights. It is also possible to install the side guards with a minimum gap

between flight and side guard of approx. 2 mm (0.08"). There is a certain risk for rubbing and abrasion between the flights and the side guards. The distance E_1 between the side guards and the hold-down- and support shoes/wear strips should not be smaller than 5 mm (0.2").

	Possible flight indents E (not for M2533F05 edge flight)

HabasitLINK® accessories – 1" pitch belting

Hold-down devices for M2500 (straight belts)

For elevators with back-bending (Z-conveyors) **hold-down devices** are used to keep the belt down when it is changing from horizontal to inclined direction. For wide belts (e.g. > 600 mm (23.6") wide), slider shoes on the belt edge are often not sufficient to keep it on the track. In such cases hold-down devices on the bottom side of the belt are used to guide it through the back-bending curve. Further details see design guide.

Compatibility: The hold-down device can be put into M2500 1" HabasitLINK® straight-running modular belt. The modules are inserted into the prepared position, one module every second row.

As long as link increment is (16.6 mm) respected, any position over the belt width is possible.

For a center positioning consider an offset "e" of 4.2 mm. Allow the necessary distance for the sprocket engagement!

Back bending radius R: min 250 mm (10")

Sprockets: minimum size
 M25S12 with 40 mm / 1.5" square bore
 M25S12 with 30 mm round bore
 M25S10 with 1" square bore
 M25S10 with 30 mm round bore

Standard materials: POM white
 Other materials on request.

M2533 with M2500V01

Hold-down device M2500V01

It is very important that the guide rail is very smooth, without joining. It is also important that enough clearance is provided to allow the belt to expand or shrink.

M2531C15

Note

The combs are fixed using a special distance bushing that allows lateral movement. This allows the combs to adapt their position to the lateral displacement of the belt, caused by thermal expansion. For belt widths up to 300 mm (12"), the plates can be firmly fixed (2 plates max). The fixation of the comb support should be adjustable to allow fine-tuning.

Assembly conceptions for M2540 radius belts, flights and side guards

Middle flights only

Middle and edge flights

Side guards only (clip-on version)

Lane divider

Standard indents

The combination of flights and side guards is possible, but not recommended. With side guards hold-down modules must be used. On the return way the belt has to be supported either on the flights or between flights and side guards (gap only 15 mm (0.6") wide). Do not support or guide the belt on the hold-down tabs.

Indent	Left belt edge (running direction)	Right belt edge (running direction)
Middle flights only (no indent flights)	70 mm (2.8")	70 mm (2.8")
Middle flights and indent flights	25 mm (1")	25 mm (1")
Side guards	3.5 mm (0.14")	3.5 mm (0.14")

M2540 equipped with lane dividers													
Min belt width		Standard width steps		Min edge distance		Offset to belt center		Distance lane divider		Height		Length	
B_0		Y		B		e^*		F		H		L	
mm	inch	mm	inch	mm	inch	mm	inch	mm	inch	mm	inch	mm	inch
400	15.75	50	1.97	191.7	7.55	0 or 8.3	0 or 0.33	25	0.98	25	0.98	36	1.42

*If belt width $b_0 / 16.66$ (0.656) is an even number, the offset will be 8.3 mm (0.33") to left or right.

If the result is an odd number, there will be no offset for center lane dividers.

Do not place sprockets below lane dividers.

Consider belt travel direction v.

4178BRO.MOD-en1112HQ

To avoid the belt flipping over or slipping off the inner guide rail in the curve, hold-down guides are normally used. They are, however, not suitable if the conveyed goods are larger than the belt width or if side transfer over the belt edge is required. For these cases special modules equipped with hold-down tabs (hook modules) are available for both belt edges.

Hold-down edge modules M2540Hxx* and M2540 MTW

Hold-down tabs are used for all applications where the products must be able to move over the belt edge. The use of hold-down modules is also mandatory when applying side guards.

M2540Hxx

M2540 MTW

Installation

Make sure to keep clearance between guides, sprockets and hold-down tabs. They are meant to act as lift-off safety devices and not as guides! They will, if in contact with the guides, wear off quickly and may increase the tension in the belt.

For these reasons the conveyor needs to be designed with the appropriate accuracy.

Minimum belt width 150 mm (6") (2 sprockets) for use of hold-down edge modules and 250 mm for hold-down middle modules.

M2540Hxx

M2540 MTW

4178BRO.MOD-en1112HQR

Hold-down device for M2540

Hold-down middle module (M2540V00)

For elevators with back bending (Z-conveyors) hold-down devices are needed to keep the belt down when it is changing from horizontal to inclined direction. For wide belts (e.g. > 600 mm (23.5") wide) slider shoes on the belt edge are often not sufficient to keep it on the track. In such cases hold-down devices on the bottom side of the belt are used every second row to guide it through the back-bending curve. For belt width 300 mm + n * 100 mm the hook is placed in the belt center. For belt width 250 mm + n * 100 mm the hook has an offset of 25 mm left or right to the belt center. Please see table below.

Belt width	Offset e	Running direction A	Running direction B
300	0	–	–
350	25	to the left	to the right
400	0	–	–
450	25	to the left	to the right
500	0	–	–
550	25	to the left	to the right
600	0	–	–
650	25	to the left	to the right
700	0	–	–
750	25	to the left	to the right
800	0	–	–
850	25	to the left	to the right
900	0	–	–

M2540V10

M2540V10

Sprocket sizes

The combination sprocket/shaft size has to be selected in such a way to avoid collision of the hold-down tabs with the shaft. Minimum sprocket sizes: M25S1002Q, M25S1030R, M25S1240Q.

Note

The hold-down device is not recommended to be used for radial guidance. They can be worn away quickly. Also, they should not be used to hang-up the belt on the return path.

Further design indications see Design Guide Radius Belts and Slider Support Systems.

* Available edge module length same as with standard edge module

Real belt widths are in most cases 0.1% to 0.3% smaller.

Standard belt widths in increments of 85 mm (3.35"). Smallest possible width 85 mm (3.35"). Non-bricklaid belts 85 mm (3.35") and 170 mm (6.69") wide.

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® straight - 1" pitch belting

M2623 Non Slip 1"

Description

- 0% open area
- Closed hinge
- Safe Non Slip profile for people mover applications
- Rod diameter 6 mm (0.22")
- Smart Fit rod retention
- Standard belt material is antistatic
- Electro conductive and flame retardant materials available
- Also available with pattern free indent 85 mm (3.35")

Real belt widths are in most cases 0.1% to 0.3% smaller.

Standard belt widths in increments of 85 mm (3.35"). Non-standard widths are offered in increments of 17 mm (0.67"). Smallest possible width 85 mm (3.35").

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® straight - 1" pitch belting M2670 Flat Top Heavy Duty 1"

Description

- Heavy duty belt
- Imperial widths
- 12.7 mm (0.5") thick
- High strength and stiffness
- 0% open area
- Closed hinge
- Rod diameter 6 mm (0.22")
- Smart Fit rod retention
- Double row solid and split sprockets

Available accessories

- GripTop modules

HabasiLINK® straight - 1" pitch belting

M2670 Flat Top Heavy Duty 1" MTW

Description

- Mold to width heavy duty belt
- Imperial widths
- 12.7 mm (0.5") thick
- High strength and stiffness
- 0% open area
- Closed hinge
- Rod diameter 6 mm (0.22")
- Smart Fit rod retention
- Double row solid and split sprockets
- Two versions:
 - M2670Kxx (modules without tabs),
 - M2670Kxx-T20 (modules with 2 tabs)

Available accessories

- For standard guiding profiles, refer to the Habiplast® brochure

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® straight - 1" pitch belting M2670 GripTop 1"

Description

- Heavy duty belt
- Imperial widths
- 12.7 mm (0.5") thick
- High strength and stiffness
- Abrasion resistant GripTop, High friction
- 0% open area
- Closed hinge
- Rod diameter 6 mm (0.22")
- Smart Fit rod retention
- Double row solid and split sprockets

Available pattern

- In rows of any distance in multiples of 25.4mm (1")
- With indent 50.8mm (2")

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

Description

- 0% open area
- Solid plate
- Smooth and flat surface with flush edges
- Designed for 90° self clearing transfer
- Suitable for 114.3 mm (4.5") track
- 12.7 mm thick
- Rod diameter 6 mm
- Smart Fit rod retaining
- Food approved materials available
- Robust design
- Suitable with all M2600 sprockets
- Tracking tabs for belt guiding

S, Z: molded sprockets; S-C1, Z-C1: machined sprockets; Z-H: Multi-Hub sprockets. Other sprocket and hub sizes on request.

Key ways for round bore shape follow European standards for metric sizes and US standards for imperial sizes. For detailed dimensions see table in the Engineering Guide chapter Design Guide.

Other materials and **Multi-Hub sprockets** (split sprockets with interchangeable hubs) are available on request.

Sprocket one-piece (solid)

Split sprocket

HabasitLINK® sprockets 1" pitch belting

Sprocket series M2600

Sprocket arrangement

- BE** Belt
- RC** Retainer
- SP** Sprocket
- b₀** belt width

The distance **C** between the sprocket axis and the slider support **ST** is minimal 28 mm (1.1").

Wearstrips

Between driving shaft and idling sprockets or rollers the belt is carried by a slider support furnished with longitudinal wear strips (SL) from UHMW Polyethylene or other suitable material.

Sprocket positioning

For correct positioning of the center sprocket divide the belt width by the link increment. The rounded result will be an even or an odd number. These numbers are the criteria for offset or no offset, see table.

Belt type	Sprocket spacing a		Sprocket edge distance (minimal)		Criteria for center sprocket position	Result of formula (rounded)	Offset e	Remarks
	minimal	maximal	X _L	X _R

The number of sprockets depends on the belt load and may be different for driving and idling shafts. For calculation of correct sprocket number please use LINK-SeleCalc.

HabasitLINK® radius 1" pitch belting M2791 Radius Flush Grid 1" MTW

Description

- Mold to width radius belt 4" (101.4 mm) wide
- For radius and straight conveying
- Collapse factor 8.5
- 24% open area
- 38% open contact area
- largest opening 5.9 x 10.7 mm (0.23"x0.42")
- Easy to clean
- Smart Fit rod retention
- Rod diameter 5 mm (0.2")
- Lug teeth sprockets

Belt data

	Nominal belt width b_0		Belt material	Rod material	Nominal tensile strength F_N straight run		Nominal tensile strength F_N in curve ⁽¹⁾		Belt weight m_B	
	mm	inch			N	lbf	N	lbf	kg/m	lb/ft
M2791K04	101.4	4.0	POM	PA	1500	338	1500	338	1.18	0.79
M2791K04	101.4	4.0	POM	PBT	1500	338	1500	338	1.18	0.79

Real belt widths are in most cases 0.1% to 0.3% smaller.

Diameter of idling rollers (minimum)		Diameter of support rollers (minimum)		Diameter for gravity take-up and center drive rollers (minimum)		Backbending radius for elevators without side guards or hold-down devices (minimum)	
mm	inch	mm	inch	mm	inch	mm	inch
40	1.6	50	2	100	4	150	6

Temperature range

Module material	Rod material	Temperature range	
POM	PBT	-40 °C to +93 °C	-40 °F to +200 °F
POM	PA	-40 °C to +93 °C	-40 °F to +200 °F

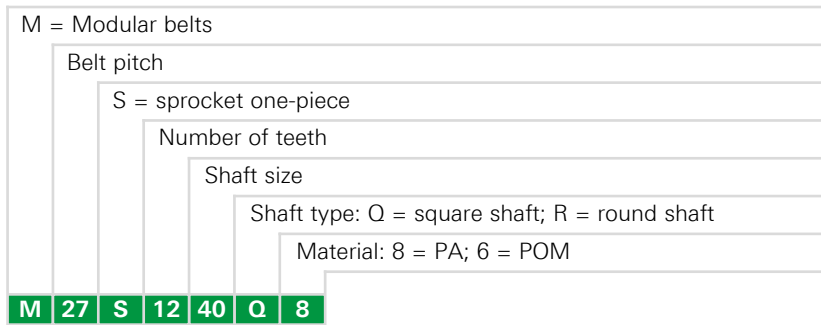

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® sprockets 1" pitch belting

Sprocket series M2700

Sprocket availability

Type	Number of teeth	Diam. of pitch $\varnothing d_p$		A_1		Hub width B_L		Square bore Q		\varnothing Round bore R		Standard material
		mm	inch	mm	inch	mm	inch	mm	inch	mm	inch	
S-C1	12	98.7	3.89	43.1	1.69	42.2	1.66	40	1.5	-	-	PA
S-C1	18	147.1	5.79	67.2	2.65	42.2	1.66	60	3	60	1.25	PA

S-C1: machined sprockets. Other sprocket and hub sizes on request.

Key ways for round bore shape follow European standards for metric sizes and US standards for imperial sizes. For detailed dimensions see table in the Engineering Guide chapter Design Guide.

Other materials are available on request.

Wear strip arrangement

The distance **C** between the sprocket axis and the slider support **ST** is minimal 28 mm (1.1").

Wearstrips

Between driving shaft and idling sprockets or rollers the belt is carried by a slider support furnished with longitudinal wear strips (SL) from UHMW Polyethylene or other suitable material.

Sprocket positioning

One double row sprocket can be applied in the center of the belt only.

Running direction **A** is recommended

HabasitLINK® straight 1" pitch belting IS610 GT (GripTop)

Description

- Open design
- Elimination of leading edge lift
- Locked on friction material
- Flexible build patterns
- Optional configurations — contact your local partner
- 72 durometer Shore A
- Connecting rod diameter = 0.156 inch (4.0 mm)

Belt data

Belt material		PP	
Rod material		PP	Nylon (PA)
Nominal tensile strength F_N straight run	N/m lb/ft	10215 700	
Nominal tensile strength F_N in curve ⁽¹⁾	N lbf		800 180
Temperature range	°C °F	5 - 71 40 - 160	5 - 71 40 - 160
Belt weight m_b	kg/m ² lb/sqft	3.4 0.70	3.4 0.70
Standard belt color		gray/white	gray/white

Additional belt colors and materials available, abrasive resistant Nylon (Polyamide) rods available.

Colors: gray base with black top; white base with white top

Belt accessories

Hold-down tabs
Hold-down tabs available in propylene and acetal only

Standard flights
Standard flights are available in standard 2" and 4" heights. Standard flight indent is 1" or 3" from outside edge of belt.

HabasitLINK® radius 1" pitch belting IS610-R (Radius Flush Grid)

Description

- 1 inch pitch
- Belt turning radius equals 2.2 times the nominal belt width up to 24 inches (609.6 mm)
- Belt turning radius equals 2.5 times the nominal belt width over 24 inches (609.6 mm)
- 72% open area
- Food approved materials
- Bi-directional
- Connecting rod diameter = 0.156 inch (4.0 mm)
- Standard belt width increments = 3 inch (76.2 mm) nominal, starting from 6 inches (152.4 mm)
- Non-standard widths available in 1/2 inch (12.7 mm) increments starting at 3 inches (76.2 mm) upon request
- Material selection may affect belt width – please contact your local partner for actual dimensions

Belt data

Coll.fact. Q	2.11	2.11	2.11	2.12	2.12	2.12	2.13	etc.						

Belt widths larger than 1200 mm (48") are not recommended; *please contact Habasit*.
Real belt widths are in most cases 0.1% to 0.3% smaller.

Standard belt widths in increments of 50 mm (2"). Non-standard widths are offered in increments of 25 mm (1"). Smallest possible width 175 mm (7").

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® radius 1-1/2" pitch belting M3840 Roller Top 1.5"

Description

- For radius and straight conveying
- 31% open area; largest opening 7x19 mm (0.27"x0.75")
- Roller lateral spacing see table belt data
- Free edge 60 mm (2.4")
- Rollers row spacing 38.2 mm (1.5")
- For low back pressure, wearstrips placed between rollers
- For product driven application wearstrips are placed directly under the rollers
- Excellent for cooling and draining
- Open hinge
- Food approved materials available
- Rod diameter 6 mm (0.24")

Belt data

For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® radius 1-1/2" pitch belting M3843 Tight Radius GripTop 1.5"

Description

- For radius and straight conveying, ideal for applications with limited space, with inclines (collapse factor 1.6)
- 31% open area; 50% open contact area; largest opening 7x19 mm (0.27"x0.75")
- Indent 30 mm (1.18")
- Abrasion resistant GripTop, high friction
- Food approved materials available
- Rod diameter 6 mm (0.24")
- Steel rods every 4th row when fully covered with rubber
- "Open window" sprockets

Accessories

- Flights M3840: minimum indent 105 / 95 mm (4.1" / 3.7")
- Clip-on side guards
- Hold-down tabs

Belt data

Belt material		PP	
GripTop material		TPE	
Rod material		POM / Steel	PA / Steel
Nominal tensile strength F'_N straight run	N/m <i>lb/ft</i>	20000 <i>1370</i>	20000 <i>1370</i>
Nominal tensile strength F_N in curve ⁽¹⁾	N <i>lbf</i>	1800 <i>405</i>	1800 <i>405</i>
Temperature range	°C °F	5 - 60 40 - 140	5 - 60 40 - 140
Belt weight m_b	kg/m ² <i>lb/sqft</i>	8.9 <i>1.83</i>	8.9 <i>1.83</i>

⁽¹⁾ For $b_0 > 600$ mm (23.6") higher admissible values are admissible.

Stainless steel rods are needed in every 4th row if GripTop modules are applied every row (fully covered with rubber).

Use GripTop modules in every second row and M3843 middle modules in the intermediate rows to achieve a sufficient lateral stiffness without using steel rods (in this case the belt weight is around 10% less than the value indicated in the table).

Diameter of idling rollers (minimum)		Diameter of support rollers (minimum)		Diameter for gravity take-up and center drive rollers (minimum)		Backbending radius for elevators without side guards or hold-down devices (minimum)		Backbending radius for elevators with side guards or hold-down devices (minimum)

HabasitLINK® radius 1-1/2" pitch belting M3892 Raised Deck 1.5"

Description

- Imperial belt width
- For radius and straight conveying, ideal for case handling (collapse factor 2.2)
- 45% open area; 82% open contact area; largest opening 10.7x20.6 mm (0.42"x0.81")
- Indent of 32 mm (1 1/4")
- Excellent for shifting goods sideways on and off the belt with simple conveyor design
- Food approved materials available
- Rod diameter 6 mm (0.24")
- Smart Fit rod retention
- Large distance between wearstrips possible
- "Open window" sprockets

Belt data

Coll.fact. Q	2.11	2.11	2.11	2.12	2.12	2.12	2.13							

Belt widths larger than 1270 mm (50") are not recommended; please contact your Habasit representative. Real belt widths are in most cases 0.1% to 0.3% smaller.

Standard belt widths in increments of 2.0" (50.8 mm). Non-standard widths are offered in increments of 1.0" (25.4 mm). Smallest possible width 8.0" (203.2 mm).

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

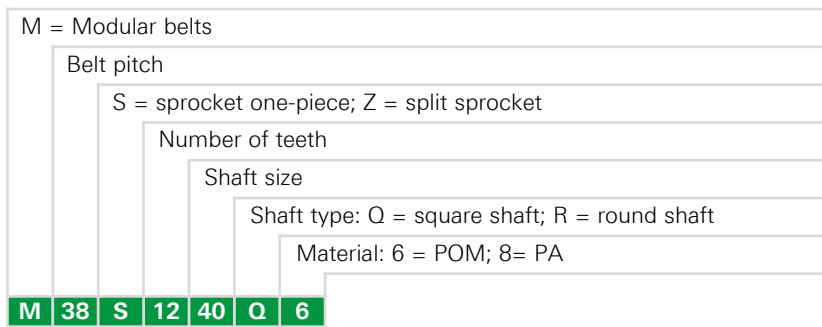

M3892 belt type is specifically designed to allow products to be wider than the belt itself. Due to the raised deck design, with stepped belt edges, it is simple to hold the belt down in radius applications. Hold-down tabs are not necessary.

M3892 raised deck 1.5"

HabasitLINK® sprockets 1-1/2" pitch belting

1'150	46	9	6	5
1'200	48	9	7	6
1'250	50	9	7	6

The number of sprockets depends on the belt load and may be different for driving and idling shafts. For calculation of correct sprocket number please use LINK-SeleCalc.

HabasitLINK® accessories – 1-1/2" pitch belting

Flights, side guards and lane dividers M3840

M3840 with flights

M3840 with side guards and lane dividers

Flights are available in 100 mm (4") height, clip-on side guards in 50 mm (2") height, see illustrations below. Flights are available with ribs on one side for better

release of wet or sticky food products (no-cling). They can be cut to specific width and height if required. The collapse factor remains unchanged.

Middle flight

M3840F10

Edge flight

M384RF10 (right side)
M384LF10 (left side)
The total length L of the right and left type add to 200 mm (8")

Side guards

M384RG05 (right side)
M384LG05 (left side)
Left and right version can be put on the opposite edge (no functional problems) but they cannot be mixed.

Lane divider

M3840W02

Standard range of belt widths b_0 for belts with flights

*If belt width $b_0 / 25 (0.98)$ is an even number, the offset will be 12.5 mm (0.5") to left or right.

If the result is an odd number, there will be no offset for center lane dividers.

Do not place sprockets below lane dividers.

Consider belt travel direction v.

To avoid the belt flipping over or slipping off the inner guide rail in the curve, hold-down guides are normally used. They are, however, not suitable if the conveyed goods are larger than the belt width or if side transfer over the belt edge is required. For these cases special modules equipped with hold-down tabs (hook modules) are available for both belt edges.

Hold-down modules (M3840H)

Hold-down tabs are used for all applications where the products must be able to move over the belt edge. The use of hold-down modules is also mandatory when applying side guards.

Installation

Make sure to keep clearance between guides and hold-down tabs. They are meant to act as lift-off safety devices and not as guides! They will, if in contact with the guides, wear off quickly and may increase the tension in the belt.

For these reasons the conveyor needs to be designed with the appropriate accuracy.

Minimum belt width 175 mm (7") (2 sprockets).

Sprocket sizes

The combination sprocket/shaft size has to be selected in such a way to avoid collision of the hold-down tabs with the shaft. Minimum sprocket sizes: M38S1240Q, M38S1260Q.

Note

The hold-down tabs are not recommended to be used for radial guidance. They can be worn away too quickly. They should not be used to hang up the belt on its return way.

Further design indications see Design Guide Radius Belts and Slider Support Systems.

HabasitLINK® accessories – 1-1/2" pitch belting

Side guards M3843

Side guards are available in 50 mm height only.

The snap-on side guards for M3843 cannot be used in combination with snap-on hold-down tabs (hooks or side tabs). To avoid the belt in the curve to flip over or slip off the inner guide rail, hold-down guides can be applied.

M3843 with side guards

HabasitLINK® accessories – 1-1/2" pitch belting

Hold-down tabs and side tabs for M3843

To avoid the belt flipping over or slipping off the inner guide rail in the curve, hold-down guides are normally used. They are, however, not suitable if the conveyed goods are larger than the belt width or if side transfer over the belt edge is required. For these cases special modules equipped with hold-down tabs (hook modules) or side tabs are available for both belt edges.

Hold-down modules (M3843H00)

Hold-down tabs are used for all applications where the products must be able to move over the belt edge.

Side tabs (M3843V00)

Side tabs can be used instead of hold-down tabs for all applications where the products must be able to move over the belt edge.

Installation

Both hold-down tabs and side tabs are snapped into the square hole provided at the outermost link of the edge modules. If ordered accordingly, M3843 belts are already furnished with these hold-down tabs when delivered.

When installing on the conveyor frame, make sure to keep clearance between guides and tabs. They are meant to act as lift-off safety devices and not as guides! They will, if in contact with the guides, wear off quickly and may increase the tension in the belt. For these reasons the conveyor needs to be designed with the appropriate accuracy.

Minimum belt width 175 mm (7") (2 sprockets).

Sprocket sizes

The combination sprocket/shaft size has to be selected in such a way to avoid collision of the hold-down tabs with the shaft. Minimum sprocket sizes: M38S1240Q, M38S1260Q.

Note

The hold-down tabs are not recommended to be used for radial guidance. They can be worn away too quickly. Neither hold-down tabs nor side tabs should be used to hang up the belt on its return way. Further design indications see Design Guide Radius Belts and Slider Support Systems.

4178BRO.MOD-en1112HQR

HabasitLINK® straight 2" pitch belting M5010 Flat Top 2"

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK[®] straight 2" pitch belting M5010 Roller Top 2"

Description

- Largest opening 19x2 mm (0.7"x0.08")
- Roller lateral spacing see table belt data
- Rollers row spacing 50.8 mm (2")
- For low back pressure, wearstrips are placed between rollers
- For product driven application wearstrips are placed directly under the rollers
- Open hinge
- Food approved materials available
- Rod diameter 7 mm (0.27")

Real belt widths are in most cases 0.1% to 0.3% smaller.

Standard belt widths in increments of 75 mm (3"). Smallest possible width 225 mm (9").

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® straight 2" pitch belting M5011 Perforated Flat Top 2"

Description

- 18% open area; largest opening 2x10 mm (0.08"x0.4")
- Solid plate
- Open hinge, easy to clean
- Food approved materials available
- Rod diameter 7 mm (0.27")

Available accessories

- Flights and scoops
- Side guards
- Hold-down devices
- GripTop modules

	lb/sqft	1.64	1.64	1.70	2.46	2.46

Diameter of idling rollers (minimum)		Diameter of support rollers (minimum)		Diameter for gravity take-up and center drive rollers (minimum)		Backbending radius for elevators without side guards or hold-down devices (minimum)		Backbending radius for elevators with side guards or hold-down devices (minimum)	
mm	inch	mm	inch	mm	inch	mm	inch	mm	inch
90	3.5	100	4	150	6	150	4	250	10

Use the largest possible backbending radius for elevators with side guards or hold-down devices.

Standard range of belt widths b_0

mm (nom.)	225	300	375	450	525	600	675	750	825	900	975	1050	1125	1200	etc.
inch (nom.)	9	12	15	18	21	24	27	30	33	36	39	42	45	48	etc.

Real belt widths are in most cases 0.1% to 0.3% smaller.

Standard belt widths in increments of 75 mm (3"). Non-standard widths are offered in increments of 18.75 mm (0.74"). Smallest possible width 112.5 mm (4.42").

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® straight 2" pitch belting M5032 Roller Top 2"

Description

- Strong design
- 33 % open area; largest opening 6.4x8.5 mm (0.25"x0.33")
- Rollers row spacing 50.8 mm (2")
- For low back pressure, wearstrips are placed between rollers
- For product driven application wearstrips are placed directly under the rollers
- Excellent for flushing and draining
- Closed hinge
- Food approved materials available
- Rod diameter 7 mm (0.27")

HabasitLINK® straight 2" pitch belting M5032 Roller Top - 0° - 45° - 90° 2"

Description

- Roller orientation in longitudinal 0°, 45° or lateral 90° direction available
- Low friction POM roller on solid steel pin
- Strong design, with strong retaining of the roller
- Roller protected against overload or impact
- Min. roller distance longitudinal every 50.8 mm (2") possible
- Min. roller distance transversal every 37.5 mm (1.5") possible
- Customized roller pattern possible
- Replacement of single rollers possible
- Closed hinge
- Rod diameter 7 mm (0.27")

mm	inch	mm	inch	mm	inch	mm	inch	mm	inch
90	3.5	100	4	150	6	150	6	250	10

Standard belt widths in increments of 3" (76.2 mm). Non-standard widths are offered in increments of 1.5" (38.1 mm). Smallest possible width 6.0" (152.4 mm).

Real belt widths are in most cases 0.1% to 0.3% wider.

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

Description

- 0% open area
- Solid plate
- Imperial belt width
- Minirib 3 mm (0.12") height
- Dynamic open hinge, easy to clean
- Strong link design (1" link-pitch)
- Rod diameter 7 mm (0.27")
- Smart Fit rod retention
- Food approved materials available

Available accessories

- Flights
- Hold-down devices

HabasitLINK® accessories – 2" pitch belting

Flights and side guards M5000

HabasitLINK® modular belts are available with flights to convey products on inclined conveyors. The flight modules are injection-molded one-piece designs that when installed, become an integral part of the belt. Flight modules are available with ribs on one side (no-cling) for improved release of wet or sticky food products and can also be cut to nonstandard heights.

Note: All flights have open hinge design (USDA).

	M5131 M50xx Roller Top	not applicable											

For M5060 belt types only M5060Fxx flight can be used. A combination with other flight series is not possible.

Indents (E)

The flight indent E is the distance between the edge of the belt and the edge of the flight, and F is the distance between belt edge and side guard. It is required for adequate support of the belt on its return way and hold-down during back-bending applications (elevators).

On short conveyors or with special support structure, the flights may also be applied over the full belt width (E = 0).

Notch (N)

The notch N is a gap in each row of flights, longitudinally aligned to allow the support of belts wider than 600 mm (24") on their return way or in back-bending applications. The notch width (N) and the distance (M) from the belt edge is a multiple of the link increment 18.75 mm (0.74") or 25.4 mm (1") for M5060 series. For metric M5000 series the minimum notch width is 37.5 mm (1.48") and for M5060 50.8 mm (2").

HabasitLINK® accessories – 2" pitch belting

Flights and side guards M5000

Installation of flights and side guards; indents

The side guards are usually installed with a gap (G) between the side guards and the flights. It is also possible to install the side guards with a minimum gap between flight and side guards of approx. 2 mm

(0.08"). There is a certain risk for rubbing and abrasion between the flights and the side guards. The distance E_1 between the side guards and the hold-down and support shoes/wear strips should not be smaller than 5 mm (0.2").

	Possible flight indents E

HabasitLINK® accessories – 2" pitch belting

Hold-down device for M5000

For elevators with back-bending (Z-conveyors) **hold-down devices** are used to keep the belt down when it is changing from horizontal to inclined direction. For wide belts (e.g. > 800 mm (31.5") wide) slider shoes on the belt edge are often not sufficient to keep it on the track. In such cases hold-down devices on the bottom side of the belt are used to guide it through the back-bending curve.

Compatibility: The hold-down device can be put into any M5000 HabasitLINK® modular belt. The modules are inserted into the prepared position, one module every second row. As long as link steps are respected, any position over the belt width is possible.

M5000V01

For a center positioning consider an offset "e" of 4.8 mm. Allow the necessary distance for the sprocket engagement!

Back-bending radius R: min 250 mm (10")
Sprockets: minimum size M50S0840Q (8 teeth) and M50S1060Q (10 teeth)
Standard materials: POM white, other materials possible on request
Compatible belts series: M5010, M5020, M5030

M5060V05

The tab module M5060V05 is designed as 2" mid module to be brick-layed as a regular module. The length of two link indents give stability to the tab. This module cannot be used as edge module.

Back-bending radius R: min 250 mm (10")
Sprockets: minimum size 8 teeth (M50S08)
Standard materials: POM white, other materials possible on request
Compatible belts series: only M5060

It is very important that the guide rail is very smooth, without joining. It is also important that enough clearance is provided to allow the belt to expand or shrink.

Description

- Imperial belt width
- 36% open area; 67% open contact area, largest opening 17.5x3.55 mm (0.69"x0.14")
- Easy to clean
- Straight ribs 2.8 mm thick
- Rod diameter 7 mm (0.27")
- Smart fit rod retention
- Strong edges
- Lug teeth sprockets
- Food approved materials available

Available accessories

- Combs (finger transfer plates) long and short

Belt data

PP +HW: Real belt widths are in most cases 0.1% to 0.3% smaller.

PP +GH: Real belt widths are 0.25% wider.

Standard belt widths in increments of 76.2 mm (3"). Non-standard widths are offered in increments of 38.1 mm (1.5").

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® straight 2" pitch belting M5182 Roller Top - 90° 2"

Description

- Designed for easy 90° transfer
- Imperial belt width
- Large robust roller with diameter 23 mm (0.9")
- Roller distance 50 mm (2")
- Smart-Fit rod retention
- Rod diameter 7 mm (0.27")
- Closed hinge
- Indent 50 mm (2")
- Lug teeth sprockets

S: molded sprockets; S-C1: machined sprockets. Other sprocket and hub sizes on request.

Key ways for round bore shape follow European standards for metric sizes and US standards for imperial sizes. For detailed dimensions see table in the Engineering Guide chapter Design Guide.

Other materials available on request.

Sprocket one-piece ("open window")

Sprocket one-piece (solid)

Sprocket arrangement

The distance **C** between the sprocket axis and the slider support **ST** is minimal 53 mm (2.1").

BE Belt
RC Retainer
SP Sprocket
b₀ belt width

Wearstrips

Between driving shaft and idling sprockets or rollers the belt is carried by a slider support furnished with longitudinal wear strips from UHMW Polyethylene or other suitable material.

Sprocket positioning

For correct positioning of the center sprocket divide the belt width by the link increment. The rounded result will be an even or an odd number. These numbers are the criteria for offset or no offset, see table.

Belt type	Sprocket and support roller spacing a		Sprocket and support roller edge distance		Criteria for center sprocket position	Result of formula (rounded)	Offset e	Remarks

Color	grey

Other materials on request.

Note

The combs are fixed using a special distance bushing that allows lateral movement. This allows the combs to adapt their position to the lateral displacement of the belt, caused by thermal expansion. For belt widths up to 300 mm (12"), the plates can be firmly fixed (2 plates max). The fixation of the comb support should be adjustable to allow fine-tuning.

4178BRO.MOD-en1112HQR

HabasitLINK® radius 2" pitch belting M5290 Radius Flush Grid 2"

Description

- For radius and straight conveying, ideal for spiral applications (collapse factor 2.2)
- 55% open area; 85% open contact area; largest opening 15x17 mm (0.6"x0.67")
- Imperial belt width
- Food approved materials available
- Excellent for cooling and draining
- Rod diameter 6 mm (0.24")
- Smart Fit rod retention
- Large distance between wearstrips possible; max. 635 mm (25")
- Min. width 508 mm (20")

Available accessories

- Clip-on side guards

Belt widths larger than 1600 mm (63") are not recommended; please contact Habasit. Real belt widths are in most cases 0.1% to 0.3% smaller.

Non-standard belt widths in increments of 1" (25.4 mm).

HabasitLINK® radius 2" pitch belting M5293 Tight Radius 2"

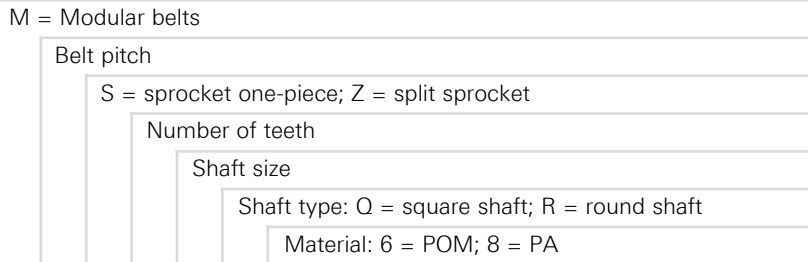

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® sprockets 2" pitch belting

Sprocket series M5200

M 52 S 10 40 Q 6

Sprocket availability

Type	Number of teeth	Diam. of pitch $\varnothing d_p$		A_1		Hub width B_L		Square bore Q		Standard material
		mm	inch	mm	inch	mm	inch	mm	inch	
S-C1	10	165.1	6.5	74.2	2.92	22.7	0.89	40 / 60	1.5 / 2.5	POM
S-C1	12	197.2	7.8	90.4	3.56	22.7	0.89	40 / 60	1.5 / 2.5	POM

S-C1: machined sprockets. Other sprocket and hub sizes on request.

Key ways for round bore shape follow European standards for metric sizes and US standards for imperial sizes. For detailed dimensions see table in the Engineering Guide chapter Design Guide.

Other materials available on request.

Sprocket arrangement

- BE** Belt
- RC** Retainer
- SP** Sprocket
- b₀** belt width

The distance **C** between the sprocket axis and the slider support **ST** is minimal 53 mm (2.1").

Wearstrips

Between driving shaft and idling sprockets or rollers the belt is carried by a slider support furnished with longitudinal wear strips from UHMW Polyethylene or other suitable material.

HabasitLINK® sprockets 2" pitch belting

Sprocket series M5200

Sprocket positioning

For correct positioning of the center sprocket divide the belt width by the link increment. The rounded result will be an even or an odd number. These numbers are the criteria for offset or no offset, see table.

Belt type	Sprocket spacing a		Sprocket edge distance (minimal)		Criteria for center sprocket position	Result of formula (rounded)	Offset e	Remarks
	minimal mm inch	maximal mm inch	X _L mm inch	X _R mm inch				
M5290	50.8	152.4	53.5	39.4	b ₀ / 25.4	even number (2, 4, 6 ...)	6.35	right in running direction A
M5293	2	6	2.11	1.55	b ₀ / 1	odd number (3, 5, 7 ...)	6.35	left in running direction A right in running direction B

Numbers of sprockets and wearstrips for M5290 and M5293

Standard belt width (nominal)		Number of sprockets per shaft min. number	Number of wearstrips	
<i>inch</i>	mm		Carryway (top)	Returnway (bottom)
20	508	3	2	2
22	559	3	2	2
24	610	3	2	2
26	660	3	2	2
28	711	5	2	3
30	762	5	3	2
32	813	5	3	2

40	1016	5	3	2
42	1067	5	3	2
44	1118	7	3	2
46	1168	7	3	2
48	1219	7	3	2
50	1270	7	3	2
52	1321	7	3	2
54	1372	7	3	2
56	1422	7	4	3
58	1473	7	4	3
60	1524	9	4	3
62	1575	9	4	3

The number of sprockets depends on the belt load and may be different for driving and idling shafts. For calculation of correct sprocket number please use LINK-SeleCalc.

Side guards and lane dividers are used to separate products on one belt. Both modules are clip-on versions.

M5290 with side guards and lane dividers

Side guard
M5290G02

Lane divider
M5290W02

Assembly conceptions for M5290/93 radius belts, side guards and lane dividers

M5290/93 equipped with lane dividers													
Min. belt width		Standard width steps		Min. edge distance		Offset to belt center		Distance lane divider		Height		Length	
B_0		Y		B		e^*		F		H		L	
mm	inch	mm	inch	mm	inch	mm	inch	mm	inch	mm	inch	mm	inch
508	20	25.4	1.0	127	5.0	0 or 12.7	0 or 0.5	22	0.87	25	0.98	29	1.14

*If belt width $b_0 / 25.4$ (1) is an even number, the offset will be 12.7 mm (0.5") to left or right.

If the result is an odd number, there will be no offset for center lane dividers.

Do not place sprockets below lane dividers.

HabasitLINK® straight 2" pitch belting SP620 (Flush Grid)

Description

- 2 inch pitch
- 76% open area
- Food approved materials
- Connecting rod diameter = 0.250 inch (6.4 mm)
- Standard belt width increments = 3 inch (76.2 mm) nominal, starting from 6 inches (152.4 mm)
- Non-standard widths available in 1 inch (25.4 mm) increments from 5 inches (127 mm) upon request
- Material selection may affect belt width – please contact your local partner for actual dimensions

HabasitLINK® straight 2.2" pitch belting M5482 Roller Top 2.2"

Description

- Designed for 90° transfers, various angles in 15° steps available
- Imperial belt width
- Roller with diameter 23 mm (0.9")
- Distance edge to centerline of first roller is 25.4 mm (1")
- Lateral roller distance 50 mm (2")
- Smart-Fit rod retention
- Rod diameter 6 mm (0.24")
- Strong closed edges
- Indent 15.5 mm (0.61")
- Lug teeth sprockets

inch (nom.)	6	8	10	12	14	16	18	20	22	24	26	28	30	etc.

Real belt widths are in most cases 0.1% to 0.3% smaller.

Standard belt widths in increments of 50.8 mm (2"). Non-standard widths are not offered. Smallest possible width 152.4 mm (6").

For detailed material properties refer to pages 282 - 289.

The nominal tensile strength is valid for 23 °C (73 °F). The admissible tensile force depends on the operating temperature near the drive sprockets. Within the temperature range allowed, the admissible tensile force may vary from 100% to 20% of the nominal tensile strength. For detailed information and correct calculation of effective tensile force refer to the Calculation Guide in the HabasitLINK® Engineering Guidelines.

HabasitLINK® sprockets 2.2" pitch belting

b₀ belt width

The distance **C** between the sprocket axis and the slider support **ST** is from 65 to 90 mm (2.5" to 3.5").

HabasitLINK® sprockets 2.2" pitch belting

Sprocket series M5400

Wearstrips

Between driving shaft and idling sprockets or rollers the belt is carried by a slider support furnished with longitudinal wear strips from UHMW Polyethylene or other suitable material. Positioning on the return needs to be done properly. Spacing multiple of 50.8 mm (2") Max. width of wear strip 12 mm (0.5").

Sprocket positioning

For correct positioning of the center sprocket divide the belt width by the link increment. The rounded result will be an even or an odd number. These numbers are the criteria for offset or no offset, see table.

Belt type	Sprocket spacing a		Sprocket edge distance (minimal)		Criteria for center sprocket position	Result of formula (rounded)	Offset e	Remarks
	minimal mm inch	maximal mm inch	X _L mm inch	X _R mm inch				
M5482	50.8	101.6	50.8	50.8	$b_0 / 50.8$ $b_0 / 2$	even number (2, 4, 6 ...)	0	no offset
	2	4	2	2		odd number (3, 5, 7 ...)	25.4 1	right or left side

In addition to the sprockets it is recommended to use support rollers at the belt edges on drive and idling side.

Wearstrips and return support rollers positioning

HabasitLINK® sprockets 2.2" pitch belting

Sprocket series M5400

Numbers of sprockets and wearstrips for M5482

The number of sprockets depends on the belt load and may be different for driving and idling shafts. For calculation of correct sprocket number please use LINK-SeleCalc.

HabasitLINK® accessories – 2-1/2" pitch belting

Flights M6300

HabasitLINK® modular belts are available with flights to convey products on inclined conveyors. The flight modules are injection-molded one-piece designs that, when installed, become an integral part of the belt. Flight modules for this belt series are available with flat surface only (without ribs).

Code: xx = height of flight:

- 50 mm = 05
- 100 mm = 10
- 150 mm = 15

Note: All flights have open hinge design (USDA).

Flights straight		
Code flight side guard	M6360Fxx (xx= height)	
	height H	length L
mm	50.8	152
inch	2	6
mm	101	101
inch	4	4
mm	152	152
inch	6	6

All flights can be cut to lower height (min 25 mm) for high-impact applications.

Indents (E)

The flight indent E is the distance between the edge of the belt and the edge of the flight. It is required for adequate support of the belt on its return way and hold-down during back-bending applications (elevators).

On short conveyors or with special support structure, the flights may also be applied over the full belt width (E = 0).

Indents are possible in widths as multiples of 1" (25.4 mm), min 2" (50.8 mm)

Notch (N)

The notch N is a gap in each row of flights, longitudinally aligned to allow the support of belts wider than 600 mm (24") on their return way or in back-bending applications. The notch width (N) and the distance (M) from the belt edge is a multiple of the link increment 25.4 mm (1"). For M6300 series the minimum notch width is 50.8 mm (2").

HabasitLINK® straight 2-1/2" pitch belting M6420 Flat Top Heavy Duty 2.5"

Description

S-C1: machined sprockets. Other sprocket and hub sizes on request.

Key ways for round bore shape follow European standards for metric sizes and US standards for imperial sizes. For detailed dimensions see table in the Engineering Guide chapter Design Guide.

Other materials available on request.

Sprocket one-piece (solid)

For a 100 mm wide belt double-row sprockets are recommended.

Sprocket arrangement

- BE** Belt
- RC** Retainer
- SP** Sprocket
- b₀** belt width

The distance **C** between the sprocket axis and the slider support **ST** is minimal 66 mm (2.6").

Wearstrips

Between driving shaft and idling sprockets or rollers the belt is carried by a slider support furnished with longitudinal wear strips from UHMW Polyethylene or other suitable material.

Sprocket positioning

For correct positioning of the center sprocket divide the belt width by the link increment. The rounded result will be an even or an odd number. These numbers are the criteria for offset or no offset, see table.

Belt type	Sprocket spacing a		Sprocket edge distance (minimal)		Criteria for center sprocket position	Result of formula (rounded)	Offset e	Remarks
	minimal mm inch	maximal mm inch	X _L mm inch	X _R mm inch

The number of sprockets depends on the belt load and may be different for driving and idling shafts. For calculation of correct sprocket number please use LINK-SeleCalc.

HabasitLINK® accessories – 2-1/2" pitch belting

Skid guard module and stopper module M6400

M6400 skid guard modules have been developed for longitudinal skid conveying applications to avoid move off from 100 mm wide belts.

The admissible tensile strength is limited to 60,000 N/m (4,111 lbf/ft).

Skid guard module
M6420XB1

Tire stopper modules are developed to keep car tires on a defined position on a belt. The modules are an integral part of the entire belt.

The admissible tensile strength is limited to 60,000 N/m (4,111 lbf/ft).

Stopper module
M6420S04

Material	Code	Description	Density g/cm ³	Temperature range
Polypropylene	PP	Thermoplastic material with good cost/ performance relation (material for most of the common conveying applications). Excellent chemical resistance to acids and alkalines. * High impacts below 10 °C (50 °F) must be avoided.	0.9	+5 °C to +105 °C (*) +40 °F to +220 °F (*)
Polyethylene	PE	Thermoplastic material well suited for very low temperatures and/or high impact applications. Excellent chemical resistance to acids and alkalines. Not suitable for abrasive applications. * Below -40 °C (-40 °F), thermal belt shrinkage requires a sprocket pitch diameter adaptation.	0.94	-70 °C to +65 °C (*) -94 °F to +150 °F (*)
Polyoxymethylene (Acetal)	POM	Thermoplastic material with high strength and low coefficient of friction. Impact and cut resistant surface. Suitable for heavy duty applications and low temperatures. Good chemical resistance to oil and alkalines, but not suitable for long-term contact with high concentration of acids and chlorine.	1.42	Wet conditions: -40 °C to +60 °C -40 °F to +140 °F Dry conditions: -40 °C to +93 °C -40 °F to +200 °F
Polyamide (Nylon for US market)	PA Code add. +US PA 66	Thermoplastic material with high strength and abrasion resistance. Suitable for heavy duty applications at dry conditions and elevated temperatures. Material is modified to keep its good properties stable over a long time at elevated temperatures.	1.14	Wet conditions: not recommended Dry conditions : -46 °C to +118 °C (short-term +135 °C) -50 °F to +245 °F (short-term +275 °F)
Polyamide (Nylon)	PA	Thermoplastic material with high strength and abrasion resistance. Suitable for heavy duty applications at dry conditions and elevated temperatures. Material is specially modified to keep its good properties stable over a long time at elevated temperatures.	1.14	Wet conditions: not recommended Dry conditions: -46 °C to +130 °C (short-term +160 °C) -50 °F to +266 °F (short-term +320 °F)

For detailed declarations of compliance per material and color, please contact Habasit.

Material	Code	Description	Density g/cm ³	Temperature range
Antistatic Polypropylene	PP Code add. +AS	Thermoplastic material with reduced electrical surface resistance to reduce dust accumulation and belt charge-up. * High impacts below 10 °C (50 °F) must be avoided	0.9	Wet conditions: not recommended Dry conditions: +5 °C to +105 °C (*) +40 °F to +220 °F (*)
Detectable Polypropylene	PP Code add. +DE	Thermoplastic material with a special additive which makes the material very well detectable (X-ray and metal detectors). Excellent chemical resistance to alkalines. * High impacts below 10 °C (50 °F) must be avoided.	0.95	+5 °C to + 105 °C (*) +40 °F to 220 °F (*)
Electrically conductive Polypropylene	PP Code add. +EC	Thermoplastic material with a low electrical surface and volume resistance. Electrical surface resistance below 50'000 Ohm/sq (DIN/EN 1637). Good cost/performance relation ship. Electrical resistance fulfills the DIN EN 61340 for ESD safety areas. * High impacts below 10 °C (50 °F) must be avoided.	1.02	+5 °C to +105 °C (*) +40 °F to +220 °F (*)
Electrically conductive and flame-retardant Polypropylene	PP Code add. +FC	Thermoplastic material with a combination of low electrical resistance and very good flame retardant properties. Electrical surface resistance below 50'000 Ohm/sq (DIN EN 1637). Electrical resistance fulfills the DIN EN 61340 for ESD safety areas. Flammability classification according DIN EN 13501, which is requested from the automotive industry. * High impacts below 10 °C (50 °F) must be avoided.	1.32	+5 °C to +80 °C (*) +40 °F to +176 °F (*)
Flame retardant Polypropylene	PP Code add. +FR	Flame retardant thermoplastic material for most of the common conveying applications with special demand on low-flammability. Flammability classification according DIN EN 13501, which is requested from the automotive industry. * High impacts below 10 °C (50 °F) must be avoided.	1.05	+5 °C to +105 °C (*) +40 °F to +220 °F (*)
Submersible Polypropylene	PP Code add. +GH	Thermoplastic material with a density which allows that the material sinks in water. It has a good chemical and hot water resistance which allows a continuous use in boiling water. * High impacts below 10 °C (50 °F) must be avoided. For the detailed chemical resistance please contact Habasit	1.24	+ 5 °C to + 105 °C (*) +40 °F to + 220 °F (*)
Hot water resistant Polypropylene	PP +HW	Stabilized thermoplastic material with improved resistant against oxidation and embrittlement.	0.9	+ 5 °C to + 105 °C +40 °F to + 220 °F

For detailed declarations of compliance per material and color, please contact Habasit.

Material	Code	Description	Density g/cm ³	Temperature range
HabaGUARD® Polypropylene	PP Code add. +H15	Thermoplastic material containing antimicrobial additive, with excellent chemical resistance to acids and alkalines. * High impacts below 10 °C (50 °F) must be avoided.	0.9	+5 °C to +105 °C (*) +40 °F to +220 °F (*)
HabaGUARD® Polyethylene	PE Code add. +H15	Thermoplastic material containing antimicrobial additive, well suited for low temperatures and high impact applications. Excellent chemical resistance against acids and alkalines. * Below -40 °C (-40 °F), thermal belt shrinkage requires a sprocket pitch diameter adaptation.	0.94	-70 °C to +65 °C (*) -94 °F to +150 °F (*)
Detectable Polypropylene	PE Code add. +DE	Thermoplastic material with a special additive, which makes the material very well detectable (X-ray and metal detectors). Well suitable for low temperature and/or high impact applications. Excellent chemical resistance to acids and alkalines. * Below -40 °C (-40 °F), thermal belt shrinkage requires a sprocket pitch diameter adaptation.	1.15	-70 °C to +65 °C (*) -94 °F to +150 °F (*)
Antistatic Polyoxymethylene (Acetal)	POM Code add. +AS	Thermoplastic material with reduced electrical surface resistance to reduce dust accumulation and belt charge-up. Suitable for heavy duty applications and low temperatures. Material has high strength, low coefficient of friction and scratch-resistant surface.	1.42	Wet conditions: not recommended Dry conditions: -40 °C to +93 °C -40 °F to +200 °F
Detectable Polyoxymethylene (Acetal)	POM Code add. +DE	Thermoplastic material with a special additive, which makes the material very well detectable (X-ray and metal detectors). The material has a good chemical resistance against oil and alkalines, but not suitable for long term contact with high concentration of acids and chlorine.	1.53	Wet conditions: -40 °C to +60 °C -40 °F to +140 °F Dry conditions: -40 °C to +93 °C -40 °F to +200 °F
Electrically conductive Polyoxymethylene (Acetal)	POM Code add. +EC	Thermoplastic material with a low electrical surface and volume resistance. Electrical surface resistivity ρ_s below 50'000 Ohm/sq (DIN/EN 1637). Material has a high strength and low coefficient of friction. Suitable for heavy duty applications and low temperatures.	1.42	Dry conditions: -40 °C to +93 °C -40 °F to +200 °F
Impact and cut resistant Polyoxymethylene (Acetal)	POM Code add. +IM	Thermoplastic material with advanced impact and cut resistant surface. Suitable for meat cutting conveyors and high impact applications. Good chemical resistance to oil and alkalines, but not suitable for long-term contact with high concentration of acids and chlorine.	1.42	Wet conditions: -40 °C to +60 °C -40 °F to +140 °F Dry conditions: -40 °C to +93 °C -40 °F to +200 °F

For detailed declarations of compliance per material and color, please contact Habasit.

Due to differing governmental regulations HabaGUARD / HyGUARD H15 equipped products are only for use in: USA and Japan.

Compliance with regulations in other countries has to be ensured by the user.

These products do not protect users or others against food-borne or disease causing bacteria.

Proper cleaning procedures must always be adhered to.

Material	Code	Description	Density g/cm ³	Temperature range
Fatigue resistant Polyoxymethylene (Acetal)	POM Code add. +JM	Thermoplastic material with high strength, low coefficient of friction and improved fatigue resistance. Good chemical resistance to oil and alkalines, but not suitable for long-term contact with high concentration of acids and chlorine.	1.42	Wet conditions: -40 °C to +60 °C -40 °F to +140 °F Dry conditions: -40 °C to +93 °C -40 °F to +200 °F
Low friction Polyoxymethylene (Acetal)	POM L	Thermoplastic material with high strength and low coefficient of friction (low friction grade self-lubricating additives). Impact and cut resistant surface. Suitable for heavy duty applications and low temperatures. Good chemical resistance to oil and alkalines, but not suitable for long-term contact with high concentration of acids and chlorine.	1.42	Wet conditions: -40 °C to +60 °C -40 °F to +140 °F Dry conditions: -40 °C to +93 °C -40 °F to +200 °F
Low friction Polyoxamethylene (Acetal)	POM Code add. +LF	Thermoplastic material with high strength and low coefficient of friction. Impact and cut resistant surface. Suitable for heavy duty applications and low temperatures. Good chemical resistance to oil and alkalines, but not suitable for long-term contact with high concentration of acids and chlorine.	1.42	Wet conditions: -40 °C to +60 °C -40 °F to +140 °F Dry conditions: -40 °C to +93 °C -40 °F to +200 °F
Wear resistant Polyoxymethylene (Polyacetal)	POM Code add. +PK	Extra wear resistant thermoplastic material with high strength, low coefficient of friction and very good fatigue resistance. Good chemical resistance to oil and alkalines, but not suitable for long-term contact with high concentration of acids and chlorine.	1.42	Wet conditions: -40 °C to +60 °C -40 °F to +140 °F Dry conditions: -40 °C to +93 °C -40 °F to +200 °F
Ultra low friction Polyoxymethylene (Acetal)	POM U	Thermoplastic material with high strength and low coefficient of friction (ultra low friction grade self-lubricating additives). Impact and cut resistant surface. Suitable for heavy duty applications and low temperatures. Good chemical resistance to oil and alkalines, but not suitable for long-term contact with high concentration of acids and chlorine.	1.42	Wet conditions: -40 °C to +60 °C -40 °F to +140 °F Dry conditions: -40 °C to +93 °C -40 °F to +200 °F
UV protected Polyoxymethylene (Acetal)	POM Code add. +UV	Thermoplastic material with improved resistance against UV radiation, especially for outdoor applications. The material has a high strength and low coefficient of friction. It is suitable for heavy duty applications and low temperatures.	1.42	Wet conditions: -40 °C to + 60 °C -40 °F to + 140 °F Dry conditions: -40 °C to + 93 °C -40 °F to + 200 °F
Reinforced Polyamide (Nylon)	PA Code add. +GF	Reinforced thermoplastic material with high strength. Suitable for heavy conveying applications at dry conditions and elevated temperatures. Material is specially modified to keep its good properties stable over a long time at elevated temperatures.	1.41	Wet conditions: not recommended Dry conditions: -40 °C to +145 °C (short-term +175 °C) -40 °F to +293 °F (short-term +347 °F)

For detailed declarations of compliance per material and color, please contact Habasit.

Material	Code	Description	Density g/cm ³	Temperature range
Reinforced Polyamide (Nylon)	PA Code add. +HT	Reinforced thermoplastic material with very high strength and toughness. Suitable for heavy conveying applications at dry conditions and elevated temperatures. Material is specially modified to keep its good properties stable over a long time at elevated temperatures.	1.41	Wet conditions: not recommended Dry conditions: -40 °C to +170 °C (short-term +200 °C) -40 °F to +338 °F (short-term +392 °F)
Reinforced non-stick Polyamide (Nylon)	PA Code add. +HN	Reinforced non-stick thermoplastic material with high strength. Suitable for heavy conveying applications at dry conditions and elevated temperatures. Material is specially modified to keep its good properties stable over a long time at elevated temperatures.	1.41	Wet conditions: not recommended Dry conditions: -40 °C to +170 °C (short-term +200 °C) -40 °F to +338 °F (short-term +392 °F)
Impact and cut resistant Polyamide (Nylon)	PA Code add. +IM	Tough thermoplastic material with good strength and fatigue resistance. Suitable for heavy conveying applications with high impact load. The belt properties and dimensions change with moisture absorption. The material can replace impact resistant acetal in impact intensive applications, but is more susceptible to cuts. In wet environment, dimension change needs to be considered.	1.08	Wet conditions: -46 °C to +60 °C -50 °F to +140 °F Dry conditions: -46 °C to +80 °C -50 °F to +176 °F
Polyamide 612 (Nylon)	PA 612	Tough thermoplastic material with good strength and fatigue resistance: The belt properties include good dimensional stability, low moisture absorption and high level of heat resistance.		Wet conditions: not recommended Dry conditions: -40 °C to +118 °C (short term 135 °C) -40 °F to +245 °F (short term 275 °F)
Super High Temperature	ST	Reinforced thermoplastic material with very good heat and hydrolysis resistance. Suitable for light conveying applications at elevated temperatures. Material is specially modified to keep its good properties stable over a long time at elevated temperatures. Flammability UL94 V0.	1.65	Wet conditions: on request Dry conditions: 0 °C to +200 °C (short-term +240 °C) +32 °F to +392 °F (short-term +464 °F)
Flame retardant Polybutylene-terephthalate	PBT Code add. +FR	Flame retardant thermoplastic material with excellent stiffness and hardness. Suitable for conveying applications with special demand on low-flammability. Material has good friction and wear properties by showing a good dynamic long-term behavior. Flammability UL94 V0.	1.47	Wet conditions: -40 °C to +50°C -40 °F to +122 °F Dry conditions: -40 °C to +120°C -40 °F to + 248 °F
Thermoplastic elastomer	TPE	Soft thermoplastic material with a hardness of 50 or 65 Shore A. Material has high friction values and good abrasion resistance. Suitable for conveying applications where a high grip between belt and product is required. Used for GripTop modules. * TPE with 65 Shore A is not for direct food contact	1.12	-40 °C to +60 °C -40 °F to +140 °F

For detailed declarations of compliance per material and color, please contact Habasit.

4178BRO.MOD-en1112HQ

Material	Code	Description	Density g/cm ³	Temperature range
Flame retardant thermoplastic elastomer	TPE Code add. +FR	Flame retardant soft thermoplastic material with a hardness of 50 shore A. Material has high friction values and good abrasion resistance. Suitable for conveying applications where a high grip between belt and product is required. Used for GripTop modules. Flammability UL94 V0.	1.25	-40 °C to +60 °C -40 °F to +140 °F
Thermoplastic elastomer	TPV	Soft thermoplastic material with a hardness of 55 or 72 Shore A. Material has high friction values and good abrasion resistance. Suitable for conveying applications where a high grip between belt and product is required. Used for GripTop modules.	0.96	-40 °C to +71 °C -40 °F to +160 °F

For detailed declarations of compliance per material and color, please contact Habasit.

Material	Code	Description	Density g/cm ³	Temperature range
Polypropylene	PP	Thermoplastic material with excellent chemical resistance to acids, alkalines and hot water. Abrasion resistance not as good as for POM.	0.90	+5 °C to +105 °C +40 °F to +220 °F
Polyoxymethylene (Acetal)	POM (AC)	Lubricated thermoplastic material specially formulated for molded sprockets, with high strength and good abrasion resistance. Good chemical resistance to oil and alkalines, but not suitable for long-term contact with high concentration of acids and chlorine.	1.42	Wet conditions: -40 °C to +60 °C -40 °F to +140 °F Dry conditions: -40 °C to +93 °C -40 °F to +200 °F
Polyamide	PA	Thermoplastic material for molded or machined sprockets with high strength and very good abrasion resistance. Suitable for heavy duty applications at dry conditions and elevated temperatures. Material is specially modified to keep its good properties stable over a long time at elevated temperatures.	1.14	Wet conditions: not recommended Dry conditions: -46 °C to +116 °C (short-term +135 °C) -50 °F to +240 °F (short-term +275 °F)
Thermoplastic Polyurethane	TPU	Tough thermoplastic material for molded or machined sprockets with very good abrasion resistance. Suitable for abrasive applications at wet or dry conditions with medium load. Material is specially formulated to reduce the teeth wear to a minimum.	1.24	-20 °C to +50 °C -4 °F to +120 °F
Super High Temperature	ST	Reinforced thermoplastic material with very good heat and hydrolysis resistance. Suitable for light conveying applications at elevated temperatures. Material is specially modified to keep its good properties stable over a long time at elevated temperatures. Flammability UL94 V0	1.65	Wet conditions: on request Dry conditions: 0 °C to +200 °C (short-term +240 °C) -32 °F to +392 °F (short-term +464 °F)
Ultra high molecular weight Polyethylene	UHMW PE	Ultra high molecular weight material for machined sprockets. Good abrasion resistance and very good chemical resistance.	0.94	-70 °C to +50 °C -94 °F to +120 °F

For detailed declarations of compliance per material and color, please contact Habasit.

Application	standard	POM, UHMW PE
	high abrasion, dry	PA, TPU
	high abrasion, wet	TPU
	chemicals (alkaline, acids)	PP
	high temperature	ST

Material	Code	Description	Density g/cm ³	Temperature range
Ultra high molecular weight Polyethylene	UHMW PE (PE 4000)	For heavy conveying applications (high loads); offers reduced wear and longer lifetime. Not suitable for abrasive conditions.	0.94	-70 °C to +65 °C -94 °F to +150 °F
High molecular weight Polyethylene	HMW PE (PE 1000)	For quite heavy conveying applications (relatively high loads) offers almost the same features of UHMW PE but with slightly harder surface. Not suitable for abrasive conditions.	0.95	-70 °C to +65 °C -94 °F to +150 °F
Medium molecular weight Polyethylene	HDPE (PE 500)	Low cost material suitable for most applications with moderate load and low speed. Not suitable for static nosebars. Not suitable for abrasive conditions.	0.95	-70 °C to +65 °C -94 °F to +150 °F
Cast Polyamide with incorporated Polymer and/or solid lubricating additives	Lubricated PA	Cast material with high molecular weight, high strength and very high wear resistance. Due to the incorporated lubricating additives the friction values are very low, and due to the high molecular weight the material is very tough and therefore very abrasion resistant. Suitable for heavy applications and high speeds. Material is hygroscopic (water adsorption should be taken into account).	1.13	-46 °C to +120 °C -50 °F to +248 °F

Material properties

Chemical resistance

The data presented in the following table are based on the information given by the raw material manufacturers and suppliers. It does not relieve of a qualification test of the products for your application. In individual cases the stability of the material in the questionable medium is to be examined.

Code: ■ = good resistance ▼ = conditionally / sometimes resistant □ = not resistant (not to be used)
